## Kindergarten Immunization Rates in South Dakota

28A District 26B

High immunization rates protect South Dakota's children from catching contagious diseases that can be prevented with routine vaccinations. For example, 95% of the community must be immunized to prevent an outbreak of measles. When rates drop below this safe threshold, we're all at risk.

## 2022-23 Statewide MMR **Immunization Average**

93%

#### Key

= Protected

= At risk for outbreak
